

## BRACELET SIZE GUIDE

A **bracelet** is an ornamental piece of jewelry worn around the wrist. It is flexible and predominantly made from circular or elliptical links joined together to form a chain and can feature gemstones, different colored metals, and charms. Bracelets also have clasps so they can be opened and closed around the wrist.

To determine your **bracelet** size, first measure the circumference of your wrist. Next, we recommend that you add a  $\frac{1}{2}$  inch or 15 cm to your circumference size. This will ensure that your bracelet size is comfortable and not too tight.

**Important!** When you print the document, make sure you specify **actual size**, in the print instructions so that the measuring tools print out accurately.

## BRACELET MEASUREMENT TABLE

Size	(in)	(cm)
Extra Small ( <b>XS</b> )	6.29	16
Small ( <b>S</b> )	7	18
Medium ( <b>M</b> )	7.87	20
Large ( <b>L</b> )	8.66	22
Extra Large ( <b>XL</b> )	9.44	24
